SAVE THESE INSTRUCTIONS - This section contains important instructions that should be followed during installation and maintenance of the UPS and batteries. Failure to follow these instructions can result in equipment damage. Connect the Battery The Back-UPS is shipped with one battery cable disconnected. Note: USB charging ports are only available on the BE650M2 and the BE650M2-LM. Press the POWER button. It will illuminate green and a single short beep indicating that the Back-UPS is on and providing protection for connected equipment. The Back-UPS battery will charge regardless of whether the Back-UPS is switched on or off as long as it is connected to AC power. The UPS will have full runtime capability after the initial 24-hour charging period, connected to AC power. If the red Building Wiring Fault indicator (located on the end near the power cord) is lit, your building wiring may present a shock hazard that should be corrected by a qualified electrician. Press the POWER button for at least 2 seconds. At the first beep, release the button and the UPS will turn off. A 2 second delay has been added to mitigate unintentional contact with the POWER button. The Back-UPS is able to temporarily mute user correctable alarms such as: On Battery, Battery disconnected and Overload. During such alarms, a short press (less than 2 seconds) of the POWER button will temporarily mute the alarm until the condition has been reset. A short double beep will confirm that Quick Mute has been activated. Pressing the POWER button for more than 2 seconds will turn off the UPS. Other critical events such as Battery replacement and Charger notification can not be temporarily muted. The unit in these cases must be turned off. With the UPS turned on, configuring the On Battery Indicator modes below is done by holding down the POWER button and waiting for the third beep. At the third beep, the POWER button will cycle red / green. Release the POWER button and its color will indicate the mode the UPS is in. Press the POWER button to cycle through each mode. See the table below for the 3 mode selection colors. Once the mode has been selected, wait 5 seconds and the setting will be committed to the UPS.™ Overview Use PowerChute Personal Edition software to configure the UPS settings. During a power outage, PowerChute will save any open files on your computer and shut it down. When power is restored, it will restart the computer. Note: PowerChute is only compatible with a Windows operating system. If you are using Mac OS X, use the native shutdown feature to protect your system. See the documentation provided with your computer. Installation Use a USB cable to connect the Data port on the rear panel of the UPS to the USB port on your computer. On the computer, go to [www.apc.com/tools/download](#). Select "Software Upgrades - PowerChute Personal Edition" in the "Filter by Software/Firmware" drop down menu. Select the appropriate operating system. Follow directions to download the software. HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH • Connect the UPS power cable directly to a wall outlet. • The UPS is intended for indoor use only. • Do not operate the UPS in direct sunlight, in contact with fluids, or where there is excessive dust and humidity. • Be sure the air vents on the UPS are not blocked. Allow adequate space for proper ventilation. Failure to follow these instructions will result in death or serious injury. RISK OF HYDROGEN SULPHIDE GAS AND EXCESSIVE SMOKE • Battery must be replaced when they reach end of service life. • Batteries must be replaced when the unit indicates battery replacement is necessary. • When replacing batteries, replace with the same number and type of batteries originally installed in the unit. Failure to follow these instructions could result in minor or moderate injury and equipment damage. Remove the "Stop! Connect the Battery" label that covers the outlets. Press the battery compartment cover release tabs located on the underside of the unit. Slide the battery cover off. Connect the battery cable securely to the battery terminal. It is normal for small sparks to be seen when the battery cable is connected to the battery terminal. Reinstall the battery compartment cover. Be sure that the release tabs lock into place. Feature Function Suggested Use Battery Backup + Surge Protection Outlets • Receive power from the battery for a limited period of time when a power outage, or brownout condition occurs. • Provide protection from power surges or spikes. Connect a computer, monitor and other critical peripheral devices that need to remain on during power outages or AC problems. Surge Protection Outlets • Provide protection from power surges or spikes. Connect non-critical peripheral devices (such as printer, scanner, etc.) that do not need to remain on during power outages or AC problems. USB charging ports (BE650M2/650M2-LM only) • Provide power when the unit is on AC and on battery. Charge USB devices b446bb447bb448bb449bb4450b Charging Ports Battery Backup + Surge Protection Outlets Surge Protection Outlets b451b POWER Button Building Wiring Fault USB Data Port (PowerChute) AC Power Inlet Circuit Breaker Mode Visual Indicator Audible Indicator Mode Selection Color Quiet Alarm (default) The POWER button is solid green and flashes twice every 2 seconds until Low Battery notification where it will flash green in rapid succession. No alarm until Low Battery notification where the alarm beeps twice every 30 seconds. Flashing green No Alarm No alarm while the UPS is On Battery Flashing red Full Alarm Alarm sounds 4 beeps every 30 seconds until Low Battery notification where the alarm beeps every half second. As the UPS shuts down, it sounds one beep every 4 seconds. Flashing amber Status Power Button illumination Audible Indicator On Audible Indicator Terminates Power On The Back-UPS is supplying AC power to connected equipment. Solid green None N/A On Battery Back-UPS supplying battery power to battery backup outlets. Solid green and flashes twice every 2 seconds. The audible alarm depends on the On Battery Indicator mode setting. See the On Battery Indicator Modes section for full details. - Using Quick Mute- Beeping stops when AC power is restored or the Back-UPS is turned off. Applies only to modes where the on battery alarm is audible. Low Battery notification The Back-UPS is supplying battery power to the battery backup outlets and the battery is near a total discharge state. Flashes green in rapid succession. Low Battery shutdown The battery has been completely discharged while the Back-UPS is on battery, the UPS will shut down. None - AC power is restored. AC is not restored within 32 seconds. The Back-UPS is turned off. Sleep Mode The UPS has shut down and will "awaken" once AC power is restored. None None N/A Replace Battery • The battery is disconnected. • The battery needs to be charged, or replaced. • Flashes red only. • Alternates green-red. Constant tone • Constant tone- Back-UPS is turned off. If the battery is disconnected, connect the battery or use Quick Mute. On Line Overload Condition occurs when the UPS is on AC power and the connected load exceeds the power output of the UPS. If overload persists for an extended period of time, the UPS will enter Overload Shutdown. Solid amber Constant tone - Using Quick Mute- Load removed from the UPS- Load exceeds circuit breaker and the UPS turns off. Overload Shutdown An overload condition has occurred in one or more of the battery backup outlets while operating on battery power. This also occurs if On Line Overload persists for an extended period of time. None Constant tone Back-UPS is turned off. USB Detected Fault A short circuit has been detected or an error has occurred. Alternates green-amber None N/A™
